#### PR24 Data Table Assurance

The attached report has been prepared to describe the assurance undertaken for the data tables which accompanied Northumbrian Water Limited's PR24 submission on 2 October 2023.

The process we have used is described in the attached and was undertaken over a shorter period than would have been ideal as we understand that elements of the business plan were held back to allow more time for amendments from Government and regulators.

That being said, we were able to conclude our work as described in the attached. We found no material errors in the data tables that we reviewed that were not subsequently corrected and that all forecasts could be substantiated to a documented methodology.

I am therefore confident to recommend these data tables as being robust based on the assurance work that we have completed.

Lynn O'Brien Internal Audit Manager Northumbrian Water Limited 2 October 2023

#### Introduction

Our approach to data tables assurance is outlined in appendix A2 to our business plan (<u>https://www.nwg.co.uk/globalassets/business-plan-2025-30/nes03.pdf</u>) in particular in section 7 of that appendix.

#### Our Approach

We have a multi-layered approach to assurance of the data tables that involve the following roles:

| Data Provider      | This is the main owner of the data they are responsible for ensuing that the data is of good quality, supported with a methodology and be the main liaison with the assurance provider.   |
|--------------------|---|
| Data Reviewer      | This is a peer review of the data, the reviewer ensures that all of the above responsibilities have been carried out.   |
| Pre-audit check    | This is a member of our Economic Regulation team who understand the structure of the tables and also the guidance in detail. This is an additional step for PR24 (over and above the process we follow for APR) and adds additional review and challenge from a regulatory viewpoint. |
| Assurance Provider | At this stage the data lines are provided to the relevant assurance provider (either Internal Audit or our external Technical Assurance Partner.  |
| Senior Manager     | A final sign off post audit by a member of our Executive Leadership Team.   |

The above process is controlled by a rigid workflow system which means that it has to be moved on from each stage to the next and if at any point it is sent back to data provider (as the data can only be amended by them) then it has to follow all of the steps back.

This robust approach ensures that we have several control points in the process to ensure that our data is of good quality

#### Allocating Assurance Provider

We have a risk-based approach to the allocation of work between ourselves and our Technical Assurance Partner who is Price Waterhouse Coopers ("PwC). They have been our partners for 6 years and were involved in PR19 assurance as well as every APR in between and now PR24. We have entered into a contract with them which runs until the end of 2025.

For our Annual Performance Report (APR) we risk assess the areas of non financial reporting. This is more fully described in our Data Assurance Statement (<u>Data Assurance Statement</u> <u>2022/23</u>) This risk assessment is based on a combination of the complexity of collecting the data and the relative importance of that data (eg performance commitments are more important than cost assessment data) albeit we want all of our data to be good quality. For APR all of the financial tables are assured by our financial auditor Deloitte.

#### INTERNAL AUDIT REPORT ON PR24 DATA ASSURANCE

This risk assessment means that our Technical Assurance Partner assures principally water resources (including leakage), water quality, sewage treatment works compliance as well as all related data such as properties and populations and we, in Internal Audit, would review all other non financial data. This gives us roughly 50% of the data lines each.

For PR24 we allocated the non financial data lines on the same basis as for APR so all water resources, water quality etc lines were allocated to PwC while all of the other non financial, plus financial forecasts were allocated to Internal Audit.

#### Our Approach

As each table was presented to us for assurance we first of all agreed any historic data back to APR or, where there was no APR equivalent, to our source data.

We then reviewed the forecasting methodology and made an assessment as to its appropriateness. At this point we referenced relevant guidance to ensure that this had been considered.

Once we were happy with this methodology we ensured that the data had been properly calculated and reported in accordance with this methodology.

#### **Our Findings**

- The process described in "Our Approach" above was followed in all instances.
- There were no errors identified that were not corrected by the Data Provider and progressed back through the process.
- All tables were processed through the Assurance Provider to Senior Manager and ultimately to completion.

#### Conclusion

We are able to certify that that the data tables we reviewed were produced in accordance with the guidance. They were supported by source system data if historic and substantiated by an agreed methodology where they were forecasts.

We are therefore able to recommend the submission of these tables to OFWAT.

### Observations in relation to selected information within Northumbrian Water Limited's Performance Reporting 2024 ('PR24').

Dear Sirs,

We are pleased to enclose our report in respect of our insight and observations over specific aspects of your non-financial Performance Reporting 2024 information for AMP8, the five year period ended 31 March 2030 (the full scope of our work can be found in Appendix 1).

The primary purpose of this report is to communicate our approach to the work, and the significant observations that we believe are relevant to those charged with governance.

I would like to thank all of the team at Northumbrian Water Limited for their assistance in helping us during the course of our work, and to prepare our report.

Yours faithfully

Dan Pearson Partner

#### **Executive summary**

#### **Background and purpose**

As part of the Price Review 2024 ('PR24') process, you are required to submit a business plan to Ofwat, alongside non-financial information to support your financial plan.

You have asked us to perform procedures over select non-financial data points to be submitted as part of your PR24 business plan, and report to you our insights and observations.

This document presents those findings on a line-by-line basis (Appendix 1).

#### Our approach

In performing our work, we have used the following four-step assessment process for each of the PR24 lines and tables within our scope:

#### 1. Understand the processes and the data

In order to best inform our review, we first gained an understanding of your reporting process for each line by performing interviews, walkthroughs and limited evidence inspection. As there is a large degree of overlap between the scope of our PR24 work, and the limited assurance work we have performed over your Annual Performance Report ('APR'), we combined this understanding phase where possible.

#### 2. Risk assessment

Understood how you have interpreted the Ofwat guidance for each data point and assessed whether this is appropriate. Additionally, we assessed the risk of misstating each data point and the likelihood of occurrence, whether deliberate or by error. Similarly, to above, our risk assessment for the PR24 data points leveraged our mirror process for the APR, but with consideration also given to the forward-looking element of the PR24 data tables.

#### 3. Design and execute our test procedures

We have designed bespoke test procedures for each data point which primarily comprised of:

- Agreeing the baseline and historic figures reported back to the figures reported in previous APR submissions;
- Assessing the methodology undertaken to prepare forecasts of how the 2022/23 figures are expected to change over the period 2025-2030 (and in some specific cases, beyond 2030);
- Considering the implementation of Ofwat guidance in how management has prepared the PR24 figures; and
- Corroborating the forward looking data where possible (including reconciling the information disclosed to any underlying data), and challenging management on the assumptions used in compiling the performance forecasts. We also considered the accuracy and completeness of the reported data through inspection and testing of underlying forecasting models.

#### 4. Conclude and report

#### **Key findings**

Through the procedures we performed over the non-financial data points within our scope, we did not observe any themes to the misstatements identified that were consistent or pervasive across the business plan. This is testament to the strong focus on data quality that we have observed over a number of years whilst providing you with non-financial assurance over your Annual Performance Report data tables.

This meant there was robust baseline data available that could be used to determine forecasts across the Business Planning period. We also noted that Data Providers had a good understanding over their data and the methodologies being applied to forecast this data, which was supported with evidence and explanations that linked to the Business Plan narrative.

Whilst some errors were noted through the procedures we performed, these were generally simple in nature and easily resolved by the data preparers.

#### **Our review procedures**

#### Scope

At a high level, the scope of our review and procedures over the PR24 corresponds to non-financial reporting in relation to Performance Commitments/Outcome Delivery Incentives, Water Resources, Bioresources, Pollution, Sewage Treatment Works, Water Distribution (including leakage and demand/supply side interventions) and Properties and Population. Our scope is explored in detail, on a line by line basis, in Appendix 1.

#### Approach

In delivering our work, we have performed procedures over historic information, has been used, alongside relevant assumptions and calculations, to generate a forecast of NWL's expected performance for each of the PR24 areas within our scope.

Note that unlike our approach to your Annual Performance Reporting, this review does not constitute a limited assurance engagement in accordance with the International Standard on Assurance Engagements 3000 (Revised) 'Assurance engagements other than audits or reviews of historical financial information' ('ISAE 3000'), issued by the International Auditing and Assurance Standards Board, which requires the subject matter under review to be historic in nature, rather than including future-looking information.

Where we have identified observations, we have reported these to you. Where relevant, once management had taken action to address our findings, we then re-visited those PR24 lines to determine whether the issue had been remediated.

The four steps associated with our approach are explored below

#### 1. Understand the processes, controls and data

In the APR Technical assurance engagement, we gained a detailed understanding of the data points within the scope of our PR24 engagement. To further build this understanding, we:

- Met with process, business and data owners for each data point to walkthrough the data measurement, recording, collation and reporting processes and controls; and
- Reviewed the Ofwat guidance ('PR24 business plan table guidance'), describing the methodology that has been adopted to report the non-financial information.

#### 2. Risk assessment

Based upon the understanding we gained for each data point within our scope, we assessed the risk associated with each data point in the forecast performance reporting over AMP8/PR24 reporting.

The outcome of this risk assessment process then informs our practical approach to testing (Step 3).

#### 3. Design and execute test procedures

We designed our test procedures for each data point individually based on the specific facts and circumstances identified in the previous steps in our approach to the work.

At a high level, we designed our test procedures in line with the following approach:

- High level analysis Performing a fluctuation analysis on the trends/movements in the PR24 forecasts to assess whether the magnitude of the forecasts makes sense given what we know about the business and the industry, and in light of any explanations provided by management;
- Reconciliation to the APR / WRMP Reconcile the baseline figures disclosing the 2022/23 figures in the PR19 tables to the work performed on APR (where the line titles are an exact match between APR and PR19) and/or the Water Resource Management Plan;
- Validate assumptions made Where specific assumptions have been made which drive changes in the baseline 2022/23 figure over AMP8, we have sought to sense-check these assumptions against our knowledge of the industry and to inspect corroborating information which help to validate the appropriateness of these assumptions;
- Re-performance of calculations Having tested, validated and cross-referenced the inputs to forecasting calculations, we then independently re-performed the calculations in order to determine whether we reached the same result; and
- Comparison against Ofwat guidance Our final procedure type is to check your approach to producing PR24 forecasts against the requirements within the Ofwat guidance, so as to make sure that the scope and boundaries of your reporting have been set correctly, and that any mandated assumptions or methodologies have been adopted.

#### 4. Report our observations

This report contains details of our key findings on a line by line basis in Appendix

#### Appendix 1 – Our scope and observations

This appendix presents all of the non-financial data points within the scope of our work, including the observations from our procedures, where relevant, against each data point.

Where observations have been noted, this represents that we have identified differences beyond a tolerable threshold (set on the line-by-line basis) and the extent to which these observations have been addressed in the submitted version of the data tables.

In some instances, whilst not beyond the defined tolerable thresholds mentioned above, where we have identified internal inconsistencies between reported datasets (e.g. minor differences, of less than 1%, between the same data point reported more than once across the Business Plan data tables, or between Business Plan data tables and historic APR reporting). Due to their minor nature, observations of this sort are not reported in the table below, but impact data lines OUT1.35, OUT1.39, OUT1.43, OUT2.39, OUT4.25, OUT4.48, OUT4.52, OUT4.57, OUT4.61, OUT4.66, OUT4.70, OUT4.74, OUT4.78, LS1.19 and LS1.24.

Where no observations are listed, this means we have not identified any differences beyond our tolerable thresholds. Where observations are listed, any actions taken by management to resolve or remediate the observation have been detailed in bold.

| LS1.9    | Leakage   |   |
| LS1.10   | Per capita consumption  |   |
| LS1.11   | Business demand   |   |
| LS1.12   | Total pollution incidents   |   |
| LS1.13   | Serious pollution incidents   |   |

| Line ref | Line title                            | Observations from initial procedures   |
|----------|---------------------------------------|--|
| LS1.15   | Bathing water quality                 |  |
| LS1.16   | River water quality (phosphorus)      |  |
| LS1.19   | Unplanned outage                      | The data line was not completed beyond the end<br>of AMP8 but the table had columns up to 2049-50<br>available to complete.  |
| LS1.21   | Leakage - region 1                    |  |
| LS1.22   | Leakage - region 2                    |  |
| LS1.23   | Per capita consumption - region 1     |  |
| LS1.24   | Per capita consumption - region 2     |  |
| LS1.25   | Business demand - region 1            |  |
| LS1.26   | Business demand - region 2            |  |
| LS1.31   | Supply-side scheme benefit            |  |
| LS2.2    | Compliance risk index (CRI)           |  |
| LS2.3    | Customer contacts about water quality |  |
| LS2.9    | Leakage                               |  |
| LS2.10   | Per capita consumption                |  |
| LS2.11   | Business demand                       |  |
| LS2.12   | Total pollution incidents             |  |
| LS2.13   | Serious pollution incidents           |  |
| LS2.15   | Bathing water quality                 |  |
| LS2.16   | River water quality (phosphorus)      | We identified that differing approaches had been<br>used to calculate River water quality (phosphorus)<br>in LS2.16 and LS1.16 and so the two data lines<br>present differing results for River water quality<br>(phosphorus). |
| LS2.19   | Unplanned outage                      | We observed that this data line was not completed<br>beyond the end of AMP8 but the table had<br>columns up to 2049-50 available to complete.  |
| LS2.21   | Leakage - region 1                    |  |
| LS2.22   | Leakage - region 2                    |  |
| LS2.23   | Per capita consumption - region 1     |  |
| LS2.24   | Per capita consumption - region 2     |  |
| LS2.25   | Business demand - region 1            |  |
| LS2.26   | Business demand - region 2            |  |

| Line ref | Line title  | Observations from initial procedures  |
|----------|---|---|
| LS2.31   | Supply-side scheme benefit                          |   |
|          |   | Across the SUP1A and SUP1B tables, we identified that the data forecasts were built using 21/22 data as a baseline but 22/23 data was populated using the 22/23 APR data points. This resulted in a noticeable step-change between the 22/23 and 23/24 results for some of the SUP1A and SUP1B lines. |
| SUP1A.1  | Residential water only customers                    | Having reported this observation to<br>management, they informed us they would add<br>a commentary alongside this table to explain<br>the approach and reason for the step-change<br>between 22/23 and 23/24 performance.   |
| SUP1A.2  | Residential wastewater only customers               |   |
| SUP1A.3  | Residential water and wastewater customers          |   |
| SUP1A.5  | Business water only customers                       | In the initial data table, we identified that some<br>data relating to voids had been omitted, giving rise<br>to an exception within this line. <b>This issue was</b><br><b>subsequently addressed in the version of the</b><br><b>table submitted.</b>   |
| SUP1A.6  | Business wastewater only customers                  |   |
| SUP1A.7  | Business water & wastewater customers               |   |
| SUP1A.10 | Residential properties billed                       |   |
| SUP1A.11 | Residential void properties                         |   |
| SUP1A.13 | Business properties billed                          |   |
| SUP1A.14 | Business void properties                            |   |
| SUP1A.17 | Resident population                                 |   |
| SUP1A.18 | Non-resident population (wastewater)                |   |
| SUP1A.19 | Household population                                |   |
| SUP1A.20 | Household measured population (water only)          |   |
| SUP1A.21 | Household unmeasured population (water only)        |   |
| SUP1B.1  | Total new residential properties connected in year  |   |
| SUP1B.2  | Total number of new business properties connections |   |

| Line ref | Line title                                  | Observations from initial procedures |
|----------|---|--------------------------------------|
| SUP1B.3  | Residential properties billed at year end   |                                      |
| SUP1B.4  | Residential properties unbilled at year end |                                      |
| SUP1B.5  | Residential void properties at year end     |                                      |
| SUP1B.7  | Business properties billed at year end      |                                      |
| SUP1B.8  | Business properties unbilled at year end    |                                      |
| SUP1B.9  | Business void properties at year end        |                                      |
